SharePoint

Our company can realize a net benefit of \$1.84 million over a three year period by investing in Microsoft SharePoint. SharePoint is a software used to store, organize and share information all in one secure, central location. By investing in this platform, time spent on collaboration and management of documents will be reduced, which will increase revenue.

Microsoft SharePoint is a versatile software that is designed to simplify management and sharing of documents by storing everything in one central location. The key capability of this software is that it makes internal and external collaboration of documents more efficient since all of the content is combined and stored together. The efficient collaboration makes storing, managing, and editing of documents easier. This will benefit our company because it will allow our PMPs to spend less time working with documents and more time focused on their projects and clients.

Microsoft SharePoint will cost a total of \$253,750 over three years, including hardware, annual maintenance and support costs. In return, we will see an increase in revenue of \$2,100,000 million from an increase in available billing hours. From this, our company will see a net benefit of \$1,846,250 million over a three year period.
