Flash Paper #3

SharePoint

Our company can generate a net benefit of $1,846,250 over three years by using Microsoft SharePoint. SharePoint, a software platform integrated with Microsoft Office, has the ability to connect PMPs and their clients directly with ease. Deploying this technology allows more productivity within the team which will allow us to increase the PMPs billable hours.

The key capability of SharePoint is its ability to collaborate and share documents between PMPs and their clients. Users can access this platform from any device online to share and edit documents at any given time. SharePoint can increase PMPs' billable hours by 300 which increases their face-to-face communication with clients.

Implementing SharePoint has a three-year cost of $253,750 which includes the costs for hardware, software, and maintenance. After increasing each PMP's billable hours, our company will have a three-year benefit of $2,100,000. This will result in a three-year net benefit of $1,846,250.
