Apple iTunes and App Store

Live Class Roster is an Apple application that aids students in registering for university classes. This application allows students from across the country to track and be notified when empty seats in a desired class become available. Each individual university will have its own specific platform, managed by us, allowing students to register in real time. Our company can benefit from this app by charging each university a fee to do the initial setup and then consequent monthly maintenance fees.

Live Class Roster allows students to register for classes in real time through a mobile device running iOS. A student can log into the app seamlessly with their existing university user name and password, allowing them to add a set of courses. These courses can be added by printing out a PDF template and filling it out according to your schedule. After being filled out, a picture of this template can be captured through the camera of your smartphone. The app will then decipher the handwriting and register that user for those specified classes. If the class is full, the student who added that class will be added to a waiting list. Once an empty seat arises the student who was first in the waiting list gets notified and, if this student were to not respond within five minutes, or reject the open seat, the following student will be notified. This allows students to get notified via push notifications rather than a traditional email, allowing for a quicker turn around.

By charging the university a one-time setup and monthly maintenance fee we are able to provide the best possible support for the select university. The university can choose from three tiers of service. The first and least expensive tier allows students to register and make an account with our company, which is then used to register for classes. The second tier allows students to login with their existing university credentials. The third tier allows universities to implement the waiting list system to the existing application. Universities all across the country will now be able to offer their students the ease of a smartphone app along with the integration of their school’s class schedules.
