SharePoint

Our firm can earn a net benefit of \$1.84 million over a three-year period by utilizing Microsoft SharePoint. SharePoint is a web-based software that allow users to store, view, share, and update documents in one secure location. This investment will increase revenue and allow our PMPs to create value to our clients.

Microsoft SharePoint is a browser-based collaboration and document management platform. The key advantage of utilizing SharePoint is that it can help improve an organization's effectiveness by streamlining the management of and access to data. It makes internal and external collaboration of documents more efficient since all of the content is combined and stored into one cloud-based platform. This will decrease our PMPs' time managing documents and increase their billable hours by 400 hours per year.

Over a three-year period, we expect an increase in revenue of \$2,100,000 million due to more available billing hours while only costing \$253,750 which includes hardware, annual maintenance, and support. We will have full ROI and a net benefit of \$1,846,250 million after three years of utilizing Microsoft SharePoint.
