

Kenneth Fong

MIS2501

An investment in SharePoint will help our firm experience a net benefit of \$1.9 million in the next three years. SharePoint will allow the firm to share documents between employees and PMPs to customers. By utilizing SharePoint, we will save money and PMPs could bill 400 more client hours than before.

SharePoint is a cloud-based service by Microsoft that allows individuals to discover, share, and collaborate on documents at any time. This application gives businesses a shared space to store documents and coworkers can work simultaneously on a single document. SharePoint allows teams to stay up to date with project statuses, clients, and anything else related to a project. Investment in SharePoint will increase the productivity of our team of PMPs and enable them to increase their billable hours by 400 hours per year.

SharePoint will cost us \$154,000 in three years for implementation and maintenance. We would have a revenue increase of \$2,000,250 in a three-year period. From this, we will get a net benefit of \$1.846 million in three years.

Option 1 (Current):

$$10\text{PMP} * 1500 * \$175 = \$2,625,000 * 3 \text{ years} = \$7,875,000$$

Option 2 (SharePoint)

$$9\text{PMP} * 1900 * \$175 = \$2,992,500$$

$$1\text{PMP} * 1710 * 175 = \$299,250$$

$$\text{Total} = 3292750 * 3 \text{ years} = 9,941,750$$

$$\text{Three Year Cost: } \$100,000 + (\$54,000) = \$154,000$$

$$\text{Three Year Benefit: } 3 * \$666,750 = \$2,000,250$$

$$\text{Three Year Net Benefit: } \$2,000,250 - \$154,000 = \$1,846,250$$
