Share Point

Our company has an opportunity to increase its revenue by \$ 1,846,250 over the span of three years by utilizing SharePoint. SharePoint is an affordable server technology that increases productivity with team collaboration. By implementing SharePoint technology, we can increase our yearly billable hours to 18,810 vs. only 15000 with our current system.

Share Point technology is a server platform that is installed on company's backend server and is shared across the network. It would make team collaboration possible in real time and save the time spent looking for information. For example at present our team would be able to share documents, spreadsheets, presentations with the necessary people.

If we continue to use our current system we will generate a total of \$ 7875000 over next three years. But with SharePoint our revenue will increase by \$ 2,100,000 over the period of 3 years. This technology would cost us \$ 2,53,750 that includes installation, administration and maintenance costs for 3 years. By using SharePoint Server technology we can increase revenue by our billable hours to \$ 2,100,000 over the period of 3 years.

Before Share Point	Yearly	3 years
--------------------	--------	---------

Total billable Hours	15000	45000
Total Revenue	2625000	7875000
After SharePoint		
Total Billable Hours	19000	57000
Total Revenue	3325000	9975000
Installation Cost	100,000	100,000
Maintenance Cost	18000	54000
Administering cost	33250	99750
3 year Benefits	2,100,000	
Net Benefit	1,846,250
