Steve Martorelli

Google Apps for Business

With the implementation of Google Apps for Business, our company has the opportunity to save a significant amount of money and increase our billable hours. Google Apps for Business is a set of web tools that would allow for collaboration within the suppliers and our customers from anywhere on any device. Implementation of Google Apps would allow us to increase productivity and save money because our need for a data center or IT professionals to handle our systems would be eliminated.

Google Apps for Business is a cloud-based set of tools that allow for increased productivity and access to connect from anywhere and anytime. Google Apps for Business is easy to set up and manage, allowing for more time for employees to focus on work and increase billable hours. Google Apps for Business will allow for collaboration between the customers and the shippers, to work as an integrated team. Implementation will allow us to collaborate in real time as a team on documents, spreadsheets, presentations and more. Work done in Google Apps for Business is automatically saved to the cloud, allowing for all users to access it anywhere at anytime.

Establishing Google Apps for Business will cost a monthly fee of $5 per user. By implementing this system our company will be able to cut costs by reducing head count, data centers, IT support, and software. Google Apps for Business includes 24/7 support, 99.9% uptime, and business controls and security. With the installation of Google Apps for Business our company can expect to cut costs and increase billable hours due to simple collaboration tools.
