

Google Apps for Business

The nature of our business is collaborative, therefore Google Apps for Business is an inexpensive and efficient way for our researchers to communicate. Google Apps offers many different add-ons and applications which allow our teams to work faster and smarter by giving them the ability to share their work over the cloud. These new collaboration tools is the key for our research to become more productive for a cost of only \$50 a year.

Google Apps allows us to collaborate more efficiently by allowing users to share and edit docs, spreadsheets, presentations, and more in real time. Cloud storage will allow our research teams to stay connected from any location. We will be able to work securely through email, documents, calendars, and sites from anywhere, using any device with an internet connection. This technology will streamline our business functions. We can schedule meetings, send emails, and share and approve documents with a wide variety of apps that will become essential to our business needs. This effective collaboration tool will allow our research and development team to manage projects faster

All of the capability of Google Apps can be implemented for a nominal fee of \$50. This is an inexpensive and impressive collaboration solution for its price. It currently takes us 10 years to development of a drug to approval from the FDA. Our research and development teams will be able to work more closely and more efficiently than before, with Google Apps we will shorten the time of new drug production.
