SHAREPOINT

Through investing in SharePoint, our company can generate a net benefit of \$1,846,250 over a period of three years. SharePoint offers a single platform to collaboratively work which enables more efficient use of our PMPs. Investing in SharePoint will increase the billable hours for our PMPs by 400.

SharePoint allows for administered collaboration among internal teams, as well as employees and clients. Through sharing, and editing documents with clients on the cloud network, PMPs can work additional billable hours. SharePoint also tracks revisions made on documents which can be accessed at any time. For example, if a client or our employee were to make an edit on a document and then make changes, we can revert to the original version, and access the original version by navigating through the revision history. SharePoint provides more efficiency, and advanced technology for our company thus increasing the billable hours of our employees.

SharePoint will enable our company to work more efficiently. It will cost our company \$253,750 over a period of three years, which encompasses the investment in hardware, maintenance, and 10% of one PMPs time with SharePoint. We will benefit \$2,100,000 over a period of three years from the increased billable hours when investing in SharePoint. In conclusion, our company would have a net three-year benefit of \$1,846,250 if we invest in SharePoint.
