

## SharePoint

If we make the switch to Microsoft SharePoint, our company can realize a 3-year net benefit of \$1,846,250. SharePoint allows the sharing of documents through a cloud infrastructure. The system will also make it more streamlined for the creation of simple collaboration between employees and clients.

By using SharePoint, our employees can efficiently share and manage documents such as files and resources across the organization. This allows more free time for our employees to handle more growth and increase productivity. SharePoint enables collaboration with team members inside and outside the organization across multiple platforms. The systems customization allows it to suit any division or department within our company. With this increase in efficiency, it will allow for an additional 1200 billing hours.

By implanting SharePoint, we will increase the billing hours of PMPs by 20%, which will give us an additional \$2,100,000 in revenue. It will cost the organization \$253,750 for installation of software and hardware, as well as maintenance and support. Over 3-years, SharePoint will result in a net benefit of \$1,846,250.
