

## A Data Scenario:

You are working on an opportunity management project for John Paul, VP of Sales & Distribution, for Looking Good Fashion Line. John has hired you to help him get a handle on his sales process. LGFL has good sales and an excellent product line. Management expects John to deliver at least 20% revenue growth per year over the next three years. There are plenty of customers in the market and many are interested. John's team is working flat out but John is still worried. Is his team focused on the best opportunities? How much new business do they currently think they have? Are all the members of his team operating at a high level? John just doesn't know until the sales figures come in for the month and he sees what surprises are lurking in the numbers. He wants you to give him a transparent view of the process so that he knows what will happen, not guess.

John wants to implement an opportunity management process whereby all his salespeople will approach every opportunity in a consistent way. An opportunity is defined as a specific piece of business at a specific customer that LGFL has the chance to win. Opportunities are normally described as being for a customer, involving one or more products, having an estimated close date, an estimated annual dollar value, and a probability of success. An opportunity's expected value is calculated by multiplying the dollar value of the opportunity by the probability of success, and it is recorded in the quarter in which it is expected to close. Unfortunately, this information is kept and calculated in different ways by different sales people and no one has access to it all.

John's plan is to introduce an opportunity process that includes three phases. When a new opportunity is created, it enters the *Proposal* phase meaning that LGFL must propose the products that will satisfy the customer's needs (some are off-the-shelf and others are made-to-order). Once the salesperson and John's Technical Support team figure out how to solve the customer's needs they make a proposal to the customer and the opportunity moves into the *Evaluation* phase. This phase is often frustrating as it is driven by the customer and some of them take much longer to respond than others. If the customer likes the proposal, the opportunity enters the *Negotiation* phase where John and his salesperson agree with the customer on the terms and conditions of the sale. The opportunity is closed when the first order is placed.

To make this process transparent, John wants to introduce a Sales Activity reporting process that all members of his team will use to document each of their activities associated with any given opportunity. Assuming there is a meeting with the customer, the salesperson would document the outcome by entering an activity that included the opportunity, the date, any action items for themselves or other members of John's team, a list of key points from the meeting, any change to the estimated close date, estimated value or probability of the opportunity and then a narrative description about the meeting. John is planning to limit the probabilities that sales people can use to Propose (5%, 10%, 20%), Evaluate (20%, 35%, 50%) , Negotiate ( 50%, 75%, 100%). Opportunities whose expected values stay the same or improve are good, those that decline by less than 10% are OK and those that decline by more than 10% are a problem. If a salesperson thinks the odds of an opportunity coming to completion is less than the lowest of these percentages, they are instructed to recommend killing the opportunity to John. Documenting all these activities should give John the information she needs to understand what is happening in his team and what he can expect to happen in the future.

You are reviewing your own work and want to make sure that it is of top quality.

You created the form below to collect the information that Tammy wants about everyone of the activities her sales people perform. Now that you have it completed you have some questions about it. In your prototype, the characters in italicized bold print are data recorded in the corresponding field.

|  |                   |  |              |          |
|--|-------------------|--|--------------|----------|
| Opportunity Number:<br>Customer:<br>Products:<br><br>Estimated Value:<br>Estimated Close Date:<br>Estimated Profit:<br><br>Action Items:<br><br>Description: | 2023-0014587-234  |  | Created Date | 11/22/24 |
|  | Fashionista Store |  |              |          |
|  | New dresses       |  |              |          |
|  |                   |  |              |          |
|  | \$10,000          |  |              |          |
|  | 6/8/23            |  |              |          |
|  | \$6,500           |  |              |          |
|  |                   |  |              |          |
|  | Number            |  | Action       | Who      |
|  | 1                 |  | Get pricing  | Sarah    |
|  |                   |  |              |          |
| This is a great opportunity for us to get into the designer dress market.  |                   |  |              |          |

1. When during the opportunity management process would a sales person fill out a Sales Activity report?
  - a. At any phase
  - b. Propose
  - c. Negotiate
  - d. Evaluate
2. What essential field from John's process is missing from this proposed form?
  - a. A customer contact

- b. Number of items to be sold
  - c. The probability of closing the sale
  - d. Sales territory
- 3. What field didn't John ask for but is still probably a good idea?
  - a. Action number
  - b. Estimated profit
  - c. Description
  - d. Date the opportunity was opened
- 4. What do the buttons (-,+) next to product and action most likely do?
  - a. Add or delete products / actions
  - b. Add or delete comments about a product / action
  - c. Highlight the priority of a product or action
  - d. None of these
- 5. If there are four data entities represented on this form, they are:
  - a. Task / Customer / Product / Probability
  - b. Opportunity / Value / Customer / Product
  - c. Opportunity / Task / Close date / Product
  - d. Opportunity / Action / Customer / Product

*Having analyzed John's processes and data needs you have begun to build prototype of the reports he will need. You decide that the first report you should work on for him is a summary of the expected value of all opportunities distributed according to when they are expected to close. Here is the prototype of that report. Again, italicized bold print represents data.*

| Expected Value of Current Opportunities<br>(\$000) |                     |                     |                     |                     |
|--|---------------------|---------------------|---------------------|---------------------|
|  | 2023Q1              | 2023Q2              | 2023Q3              | 2023Q4              |
| Sales Person 1                                     | <b><i>\$55</i></b>  | <b><i>\$112</i></b> | <b><i>\$400</i></b> | <b><i>\$500</i></b> |
| Sales Person 2                                     | <b><i>\$321</i></b> | <b><i>\$99</i></b>  | <b><i>\$200</i></b> | <b><i>\$150</i></b> |
| Sales Person 3                                     | <b><i>\$150</i></b> | <b><i>\$200</i></b> | <b><i>\$250</i></b> | <b><i>\$300</i></b> |

- 6. Which of John's needs is this report addressing?
  - a. Sales profitability
  - b. Increasing the close rate
  - c. Lead generation
  - d. Opportunity transparency
- 7. What business rule is most critical to this report?
  - a. Defined values for probabilities
  - b. Definition of expected value
  - c. Definition of the opportunity process
  - d. Definition of an opportunity
- 8. If you were to further divide each sales person's data to improve John's understanding of where his growth plans stand, what variable would you use?
  - a. Phases
  - b. Products
  - c. Action Items

d. Probability

The second report you prototype for John considers the status of each opportunity. You are thinking of several different ways you could define the status of an opportunity and are wondering how best to give John the most information possible in a simple, understandable report.

| Current Opportunity Status Report<br>By Sales Person<br>(\$000) |                                 |                         |                     |                   |                      |
|---|---------------------------------|-------------------------|---------------------|-------------------|----------------------|
| Opportunity   |                                 | Phase                   | Value               | Probability       | Status               |
| <b>1001</b>   | <b><i>On Pink Clothing</i></b>  | <b><i>Negotiate</i></b> | <b><i>\$500</i></b> | <b><i>50%</i></b> | <b><i>Red</i></b>    |
| <b>1002</b>   | <b><i>Dresses! Dresses!</i></b> | <b><i>Propose</i></b>   | <b><i>\$350</i></b> | <b><i>20%</i></b> | <b><i>Green</i></b>  |
| <b>1003</b>   | <b><i>Fanciest Dresses</i></b>  | <b><i>Evaluate</i></b>  | <b><i>\$400</i></b> | <b><i>60%</i></b> | <b><i>Yellow</i></b> |

9. If status is based on the direction of changes to the expected value of the opportunity, what would yellow be telling John?
  - a. Not to count on the expected value of this opportunity in his forecast
  - b. To raise his forecast because this opportunity is doing 10% better than most and a higher expected value is likely
  - c. The opportunity has lost value, but less than 10%
  - d. The opportunity has lost value, and should be killed
10. What column could best be added to this table to make it more valuable?
  - a. Action Item
  - b. Product
  - c. Current Customer
  - d. Expected close date
11. Why is the color coding of value to John?
  - a. The color coding makes the table easier to explain to his team
  - b. The color coding gives him a way to know who is his best sales person
  - c. The color coding doesn't have any value as it doesn't change the data
  - d. The color coding gives John a quick sense of whether things are getting better or worse
