

MongoDB Compass Windows Installation

1. Go to <https://www.mongodb.com/download-center/compass?jmp=hero>
Select the most recent *stable* version, a platform to **Windows 64-bit (7+)**, and click download. When the downloaded file is complete, click on it to begin the installation.
2. Click next, next, install, and finish through the Setup wizard.

3. Open the MongoDB application from your computer. Keep clicking next to skip through the tour, then click get started.
4. On the Privacy settings page, click Start Using Compass.

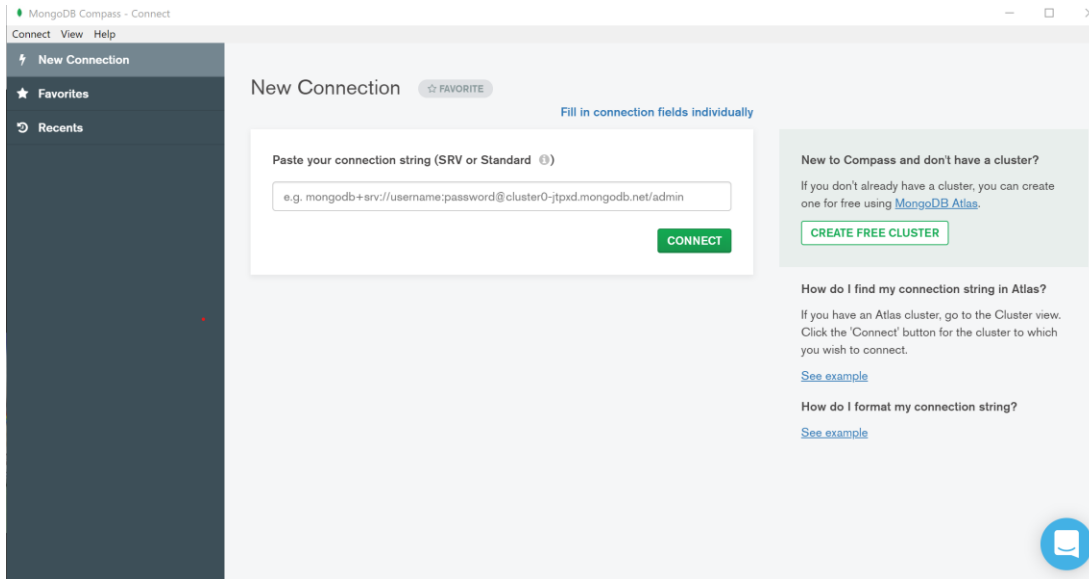

Connecting to a Server

- Use the following connection string for your connection, and put your ID and password in it. Use the same ID/PW you used to connect to MySQL server.
`mongodb+srv://username:password@cluster0.sm5q4j0.mongodb.net/test`

Example with ID and password:

`mongodb+srv://m999:XKR78@cluster0.sm5q4j0.mongodb.net/test`

- Once the connection is established you can explore the following databases.
