

Quick Guide to Installing and Setting Up MySQL Workbench

Part I. Installing and Setting Up MySQL Workbench

Windows Users:

- 1) Go to: <https://dev.mysql.com/downloads/workbench/>
- 2) **Prerequisites:** You *may* be prompted to install the **Microsoft .NET Framework 4.5** and the **Visual C++ Redistributable for Visual Studio 2015**. This has some basic software that MySQL Workbench needs to run.

If you do not have the prerequisites, you will probably be warned during installation, asking you to download them before you can move forward. Otherwise, there are instructions for how to get this software under “MySQL Workbench Prerequisites” on that download page.

- 3) Select **“Microsoft Windows”** from the **“Select Platform”** drop-down menu. Under **“Other Downloads,”** you’ll see the download option (as below).

General Availability (GA) Releases Archives ⓘ

MySQL Workbench 8.0.26

Select Operating System:
Microsoft Windows ▼

Recommended Download:

MySQL Installer for Windows
All MySQL Products. For All Windows Platforms. In One Package.
Starting with MySQL 5.6 the MySQL Installer package replaces the standalone MSI packages.
Windows (x86, 32 & 64-bit), MySQL Installer MSI [Go to Download Page >](#)

Other Downloads:

Windows (x86, 64-bit), MSI Installer (mysql-workbench-community-8.0.26-winx64.msi)	8.0.26	42.2M	Download
---	--------	-------	--------------------------

! We suggest that you use the MD5 checksums and GnuPG signatures to verify the integrity of the packages you download.

- 4) On the **“Begin Your Download”** page, it may ask you to login or sign up for a free account (see a screenshot on the next page). Do not worry about it; just click on **“No thanks, just start my download”** at the end of the page.

[No thanks, just start my download.](#)

- 4) Install the software just like you would any other program (double-click on the installer and follow the instructions to install the software on your computer).
- 5) MySQL Workbench will open. Proceed to Part II on page 4.

Part II. Setting up a connection in SQL Workbench (in the lab or your own laptop):

1) If you're working on your own computer, you can skip to step 2.

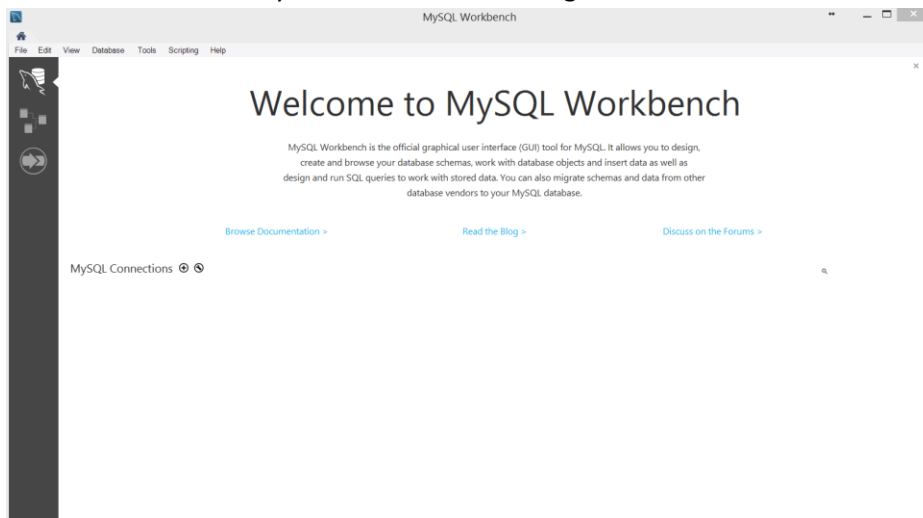

If you're on a lab computer, **make sure you have logged in with your own MIS username.**

Otherwise, you might accidentally log in to SQL Workbench as someone else. If the computer is already logged in, log out first!

2) For MYSQL Workbench to work as expected, you need to have an Internet connection. If you are on your own laptop on Temple's campus, make sure you are connected through the TUSecure wireless network. To get instructions for connecting to TUSecure visit:

<http://www.temple.edu/cs/wireless/#tusecure>

3) Start SQL Workbench. you will see the following window:

4) Click on the "plus sign" next to MySQL Connections to create a new connection.

5) At the "Setup New Connection" dialog, fill in the information as follows:

Connection Name: mis3502
Hostname: dataanalytics.temple.edu
Username: Your username is given to you by your instructor

- **The username and password will be available in the MIS Community Gradebook.** Look under **DB Username** and **DB password**. The DB Usernames all start with "j".

- For the **Connection Name**, you can specify whatever you want. Here I call it MIS3502.

Setup New Connection

Connection Name: MIS3502 Type a name for the connection

Connection Method: Standard (TCP/IP) Method to use to connect to the RDBMS

Parameters SSL Advanced

Hostname: dataanalytics.temple.edu Port: 3306 Name or IP address of the server host - and TCP/IP port.

Username: j283 Name of the user to connect with.

Password: The user's password. Will be requested later if it's not set.

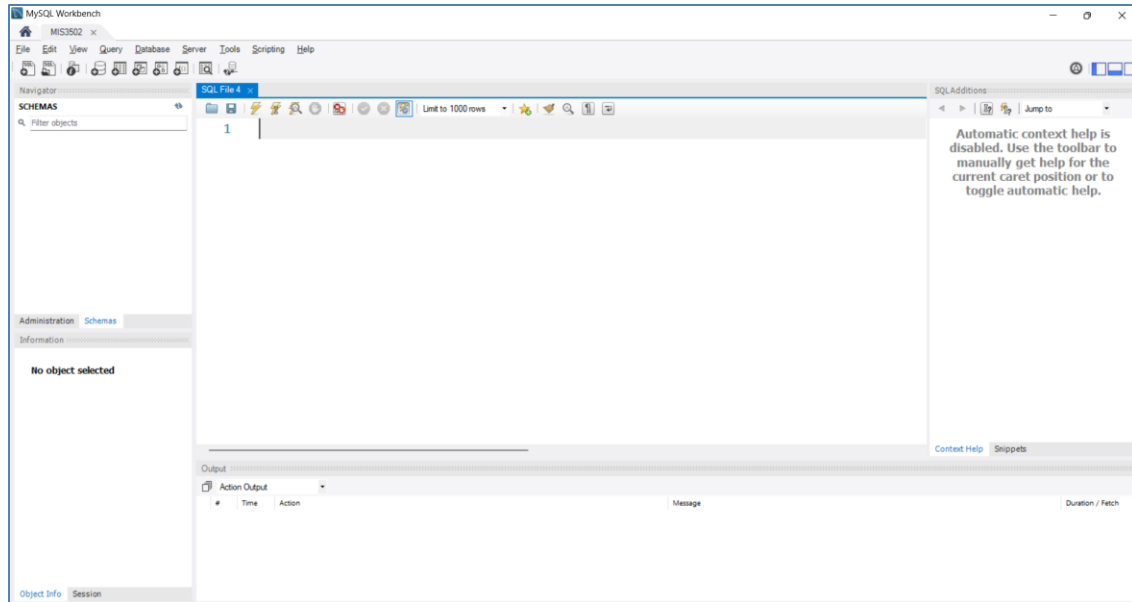

Default Schema: The schema to use as default schema. Leave blank to select it later.

- 6) Click “OK” and you’ll see the connection listed as a card under “MySQL Connections”:

Click on the connection. Make sure the username matches **your** username (it should NOT be j283)!

- 7) It will ask you for your password. **Type** your password (it’s case sensitive) and click OK.
(If you’re in a lab, don’t save your password in the vault or other people will be able to access your account!)
- 8) You’ll see the main window for MySQL Workbench:

All you really care about is the Query tab in the middle and the SCHEMAS section on the left.

9) That's it. If you see that you are set up and ready to start writing SQL statements.
