

Team Project

Context

- You and your team have volunteered to participate in a free community information security clinic (“ITACS Clinic”) and provide guidance to a small local under-served business
- In a prior meeting your team was introduced to an owner of small local business
 - The business owner explained that they are ignorant about cybersecurity, but they are very concerned that their business may get hacked
 - You explained that you can meet with the business owner and help them learn how to think about information and information system security, and how to get started in a process focused on protecting their information assets
- You will conduct your next meeting with this “client” in your 15-minute Team Presentation
 - Note: Your client knows who you are, and there is no need to take time introducing your team during your 15-minute Team Presentation

Team Project Presentation

Your Team's Mission is to deliver a 15-minute presentation to your client.

Prof. Lanter will act as the owner/manager of the business.

During your 15-minute presentation, your Team is responsible for explaining:

- 1. What cyber security is**
- 2. The process you will guide the owner of the small business through in planning and managing their business' cybersecurity**
- 3. The "homework assignment" you need them to complete in taking the first step in planning their business' cybersecurity**
 - Provide details of their homework assignment, possibly using a worked-out example or template so they know what you asking them to do and how to do it
 - Ask them to bring the completed homework to your next meeting so you can show them how to proceed with the next step in the process of planning and managing their business' cybersecurity

Deliverables

Your team will present during Unit #8.

- By end of Unit #8 each student should submit to Canvas in PDF format the following:
1. Team project PowerPoint slide presentation you presented to your client
 2. Any materials your team prepared to help your client get started doing their homework
 - Such as: A worked-out example your client can edit and use as a template to get started doing their homework
 3. Your 360-degree review, answering the questions:
 - What you contributed to your team's project?
 - What each other member of the team contributed to the project?

Project Teams

Please examine the Team roster on the right, make sure you know which team you are on

To get started...

Join your team's breakout room

1. Identify the type of small business your client owns or is responsible for
2. Create a slide that illustrates the process you will guide your client through in planning and managing their business' cybersecurity
3. Make a rough draft of the homework you will ask your client to complete and bring to your next meeting
4. Return to class and review your preliminary work with Prof. Lanter for feedback and guidance
