Unit #2 MIS5214

System Security Plan

Agenda

- Threat Modeling Exercise
- Information Systems some definitions
- Conceptual models of information systems
- NIST Risk Management Framework
- FIPS 199 Security Categorization
- Transforming qualitative risk assessment into quantitative risk assessment
- FedRAMP System Security Plan overview
 - NIST 800-53 Security controls
 - Role of FIPS 199 in selecting a security control baseline
 - NIST 800-18 classification of security control families

University of Washington Security Cards

A security threat brainstorming activity – find threat modeling cards here:

Break up into teams:

- Pretend you are security professionals
 - A car company tasked you with thinking through the security implications of the modern car computer systems
- Start with the <u>blue suit of cards ("Human Impact")</u>, consider what impacts to people would result if an attacker misused modern car systems like the attack you just witnessed
 - Either think about one car, or think about the entire car product line
 - Rank order the cards from most relevant
 - Explain your 3 top choices

University of Washington Security Cards

- Optionally, outside of class review the <u>orange "Adversary Motivation" suit</u>
- Consider what motivations adversaries might have for attacking modern car systems
- Optionally, outside of class review the <u>red "Adversary's Resources" suit</u>
- Consider what resources adversaries might have for attacking modern car systems

STRIDE

Threat model created by Microsoft, based on 6 types of threats:

- 1. **Spoofing** Can an attacker gain access using a false identity?
- 2. <u>Tampering</u> Can an attacker modify data as it follows through the application?
- 3. Repudiation If an attacker denies doing something, can we prove he/she did it?
- **4.** <u>Information disclosure</u> Can an attacker gain access to private or potentially injurious data?
- 5. <u>Denial of service</u> Can an attacker crash or reduce the availability of the system?
- **6. Elevation of privilege** Can an attacker assume the identify of a privileged user?

STRIDE Threat Modeling

A security threat brainstorming activity

• Set aside the cards, and use the STRIDE model

Consider what methods adversaries might <u>use for attacking modern car systems</u>

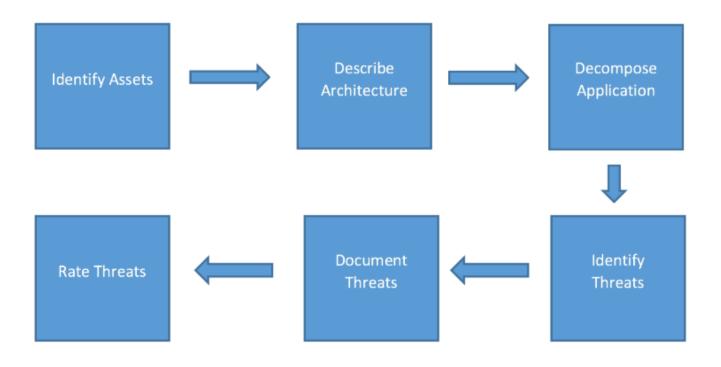

Threat	Desired property
Spoofing	Authenticity
Tampering	Integrity
Repudiation	Non-repudiability
Information disclosure	Confidentiality
Denial of Service	Availability
Elevation of Privilege	Authorization

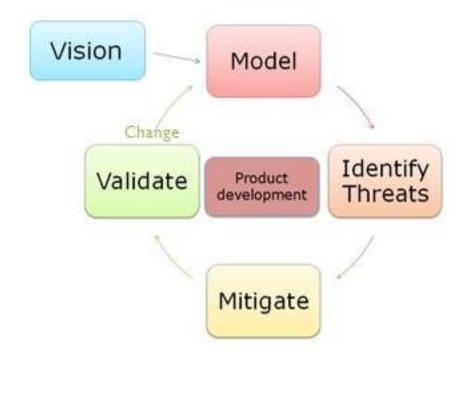

Threat Modeling

• Can be a full-time job for cyber security professionals

• Is now a skill information systems designers, developers and

architects need to have

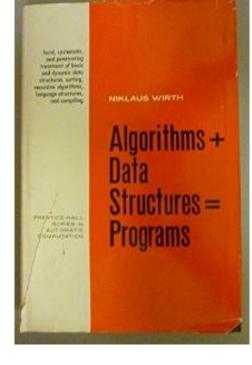

Agenda

- √ Threat Modeling Exercise
- Information Systems some definitions
- Conceptual models of information systems
- NIST Risk Management Framework
- FIPS 199 Security Categorization
- Transforming qualitative risk assessment into quantitative risk assessment
- FedRAMP System Security Plan overview
 - NIST 800-53 Security controls
 - Role of FIPS 199 in selecting a security control baseline
 - NIST 800-18 classification of security control families

Information Systems – some definitions

- **Data Structure** is a particular way of organizing data in a computer so that it can be manipulated by an algorithm
- Algorithm is a step-by-step procedure in a computer program for solving a problem or accomplishing a goal
- **Programs** = Algorithms + Data Structures
- Software are programs used to direct the operation of a computer
- Hardware are tangible physical parts of a computer system and IT network
- Firmware is software embedded in a piece of hardware
- Information systems are software and hardware systems that support data-intensive applications
- Enterprise information system is an information system which enable an organization to integrate and improve its business functions

Information System Architecture

- Is an abstraction that provides the "big picture" goals for the system
 - Guides the development process, answering questions including:
 - How is it going to be used?
 - What environment will it work within?
 - What type of security and protection is required?
 - What does it need to be able to communicate with?

 Describes the major components of the system and how they interact with each other, with the users, and with other systems

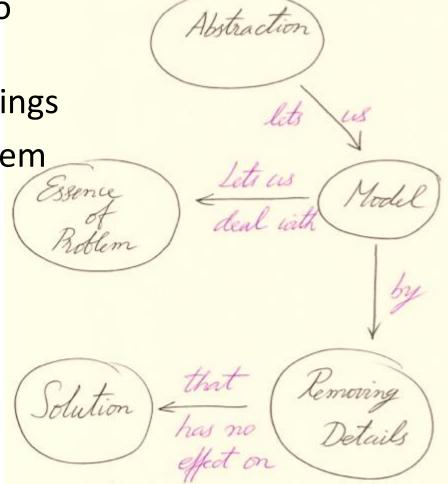

What is meant by the term "abstraction"?

 A fundamental human capability that enables us to deal with complexity

Its purpose is to limit the universe so we can do things

Selective examination of certain aspects of a problem

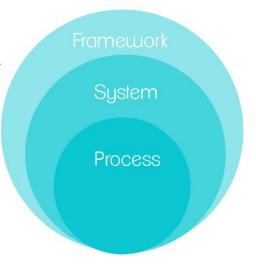

- Its goal is the purposeful isolation of important aspects and suppression of unimportant aspects (i.e. omitting details)
 - Purpose determines what is and what is not important
 - All abstractions are incomplete and inaccurate but this is their power and does not limit their usefulness
- Many different abstractions of the same thing are possible
 - Depending on the purpose for which they are made The problem solving context explains the source of their intent

What is a conceptual model?

Conceptual Mode

- An abstraction of things for the purpose of understanding them
- Enables dealing with systems that are too complex to understand directly
- Omits nonessential details making them easier to manipulate than the original entities
 - The human mind can cope with only a limited amount of information at one time
 - Models reduce complexity by separating out a small number of important things to deal with at a time
- Aids understanding complex systems by enabling visualization and communication of different aspects expressed as individual models ("views") using precise notations
 - Communicate an understanding of content, organization and function of a system
 - Useful for verifying that the system meets requirements
 - To be relied on, models must be validated by comparison to the implemented system to assure they accurately represent and document the implemented system
- Serves several purposes
 - Testing a physical entity before building it
 - Communicating a shared understanding of the system with stakeholders, users, developers, information system auditors and testers

Models help us understand Information Systems... and how to defend them...

Models are ways to describe reality

Model quality depends on skill of model designers and qualities of the selected model

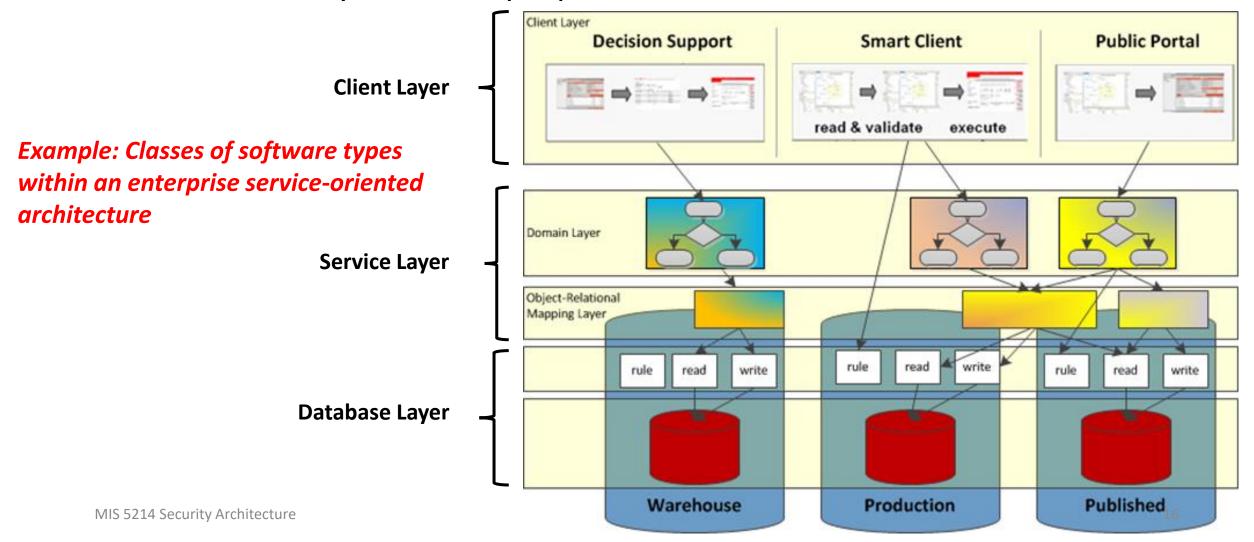

Building blocks of models is a small collection of abstraction mechanisms

- Classification
- Aggregation
- Generalization
- Can you think of any others?

Abstractions help the designer understand, classify, and model reality

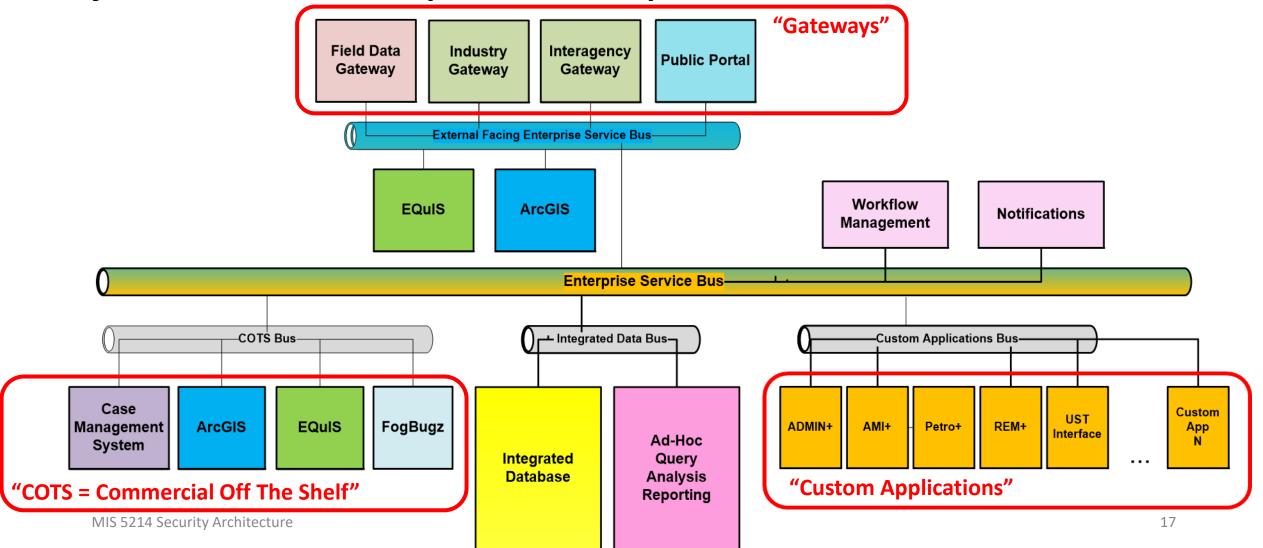

Classification

 An abstraction used to define one concept as a class of real-world objects characterized by common properties

Aggregation

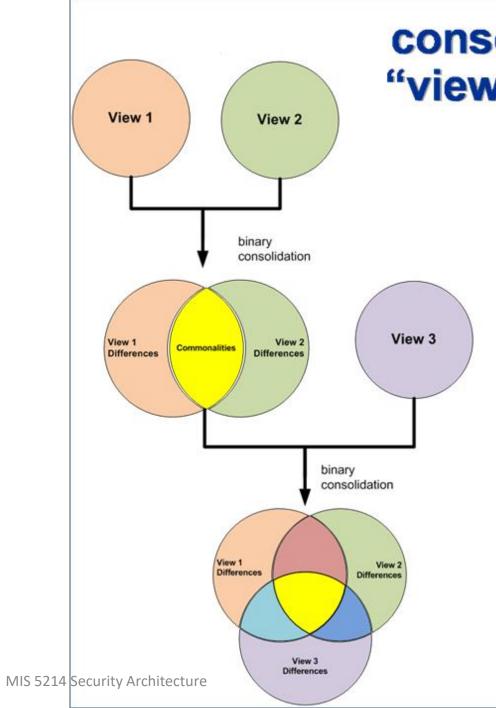

An aggregation abstraction defines a new composite class from a set of other classes that represent it components

Classification and Aggregation

Are 2 basic abstractions used for:

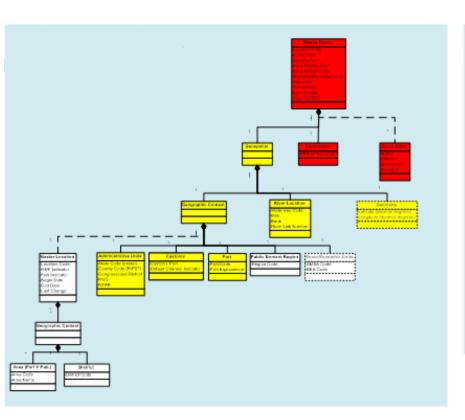

- Building data structures within databases and programming languages
- Building and organizing computational processes within applications
- Building and organizing applications within systems
- Building and organizing applications and minor systems within major systems

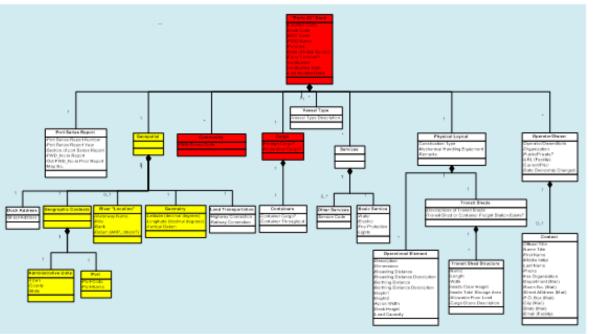

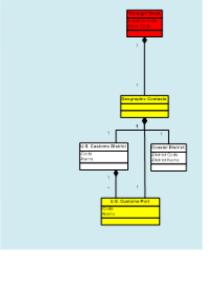

consolidation methodology "view integration"

model integration achieved by:

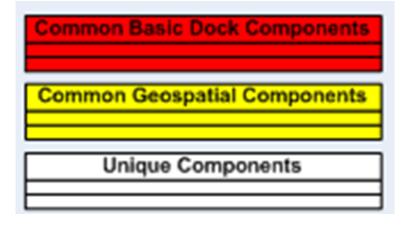

- Identifying,
- 2. Resolving, and
- 3. Consolidating
 - Commonalities (and synonyms)
 and
 - Differences (and homonyms)

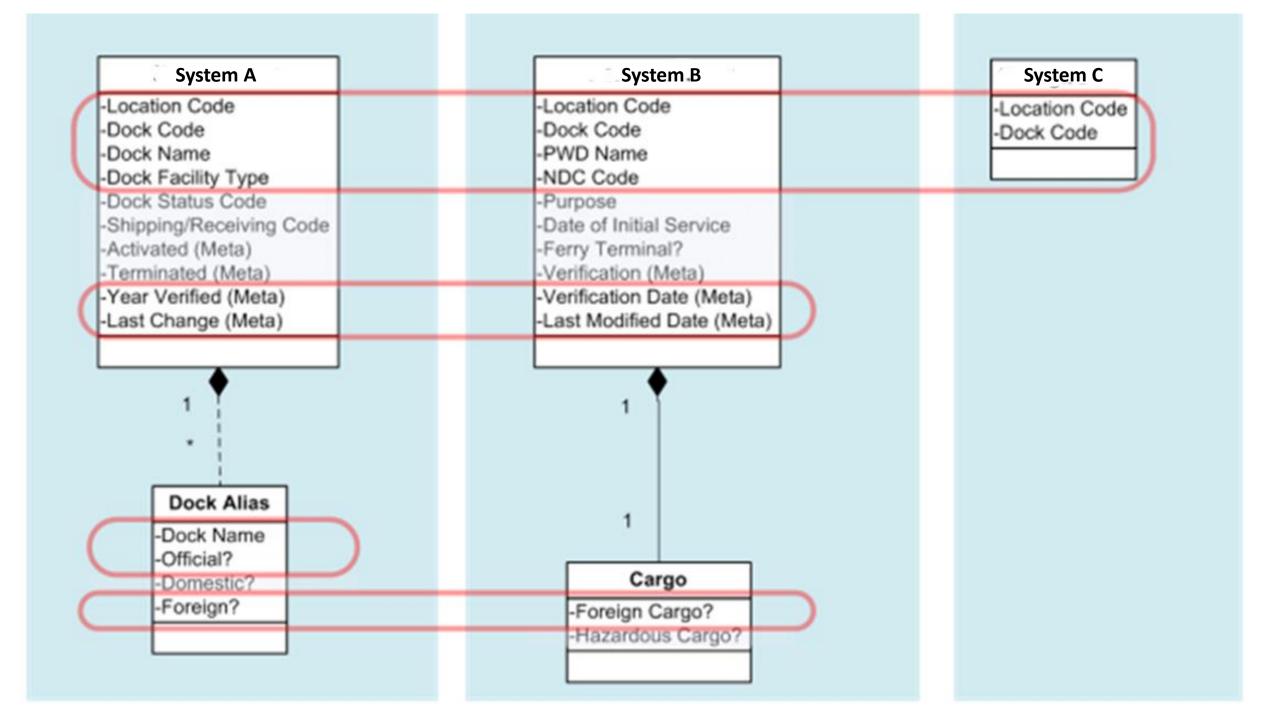

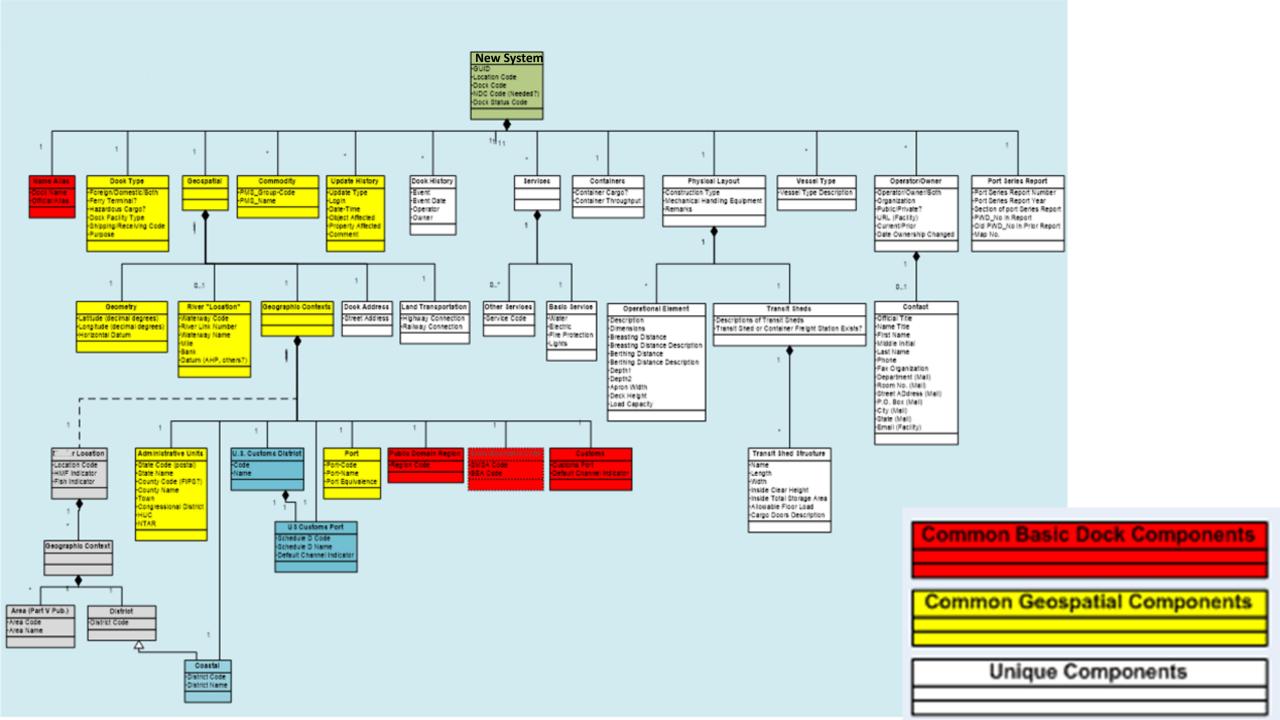

Information models from disparate business units

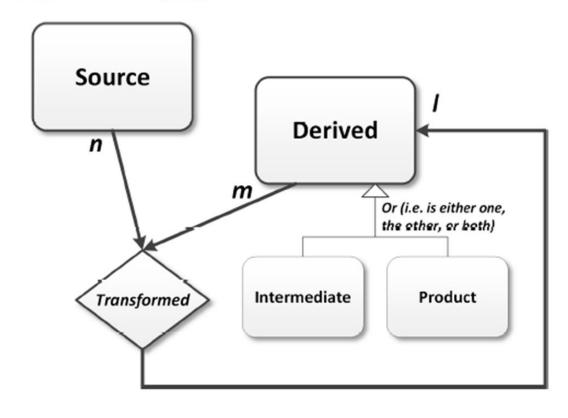

Generalization

- A generalization abstraction defines a subset relationship between elements of two more classes
- In generalization, all the abstract properties defined for the general generic class (superclass) are inherited by all the subset specialized classes (subclass)

 $Datasets = \{Dataset_i : i = source, derived\},\$

 $Dataset_{derived} = \{Dataset_{derived.k} : k = intermediate, \ product\}.$

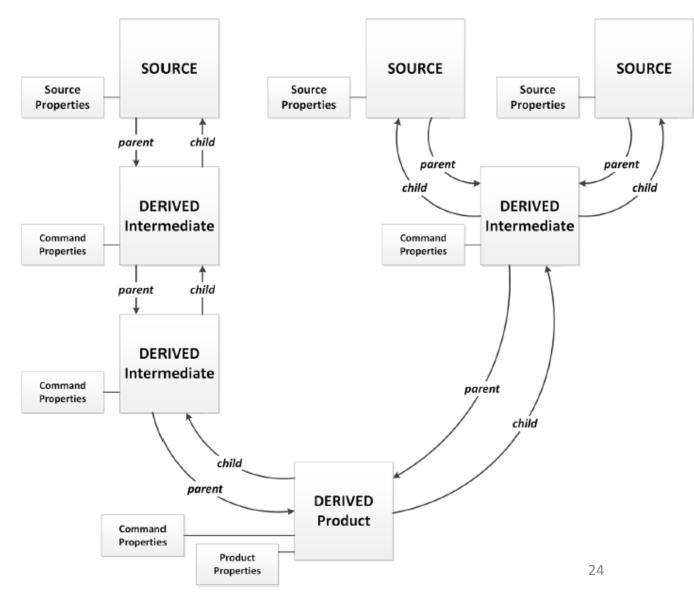

Data lineage metadata model

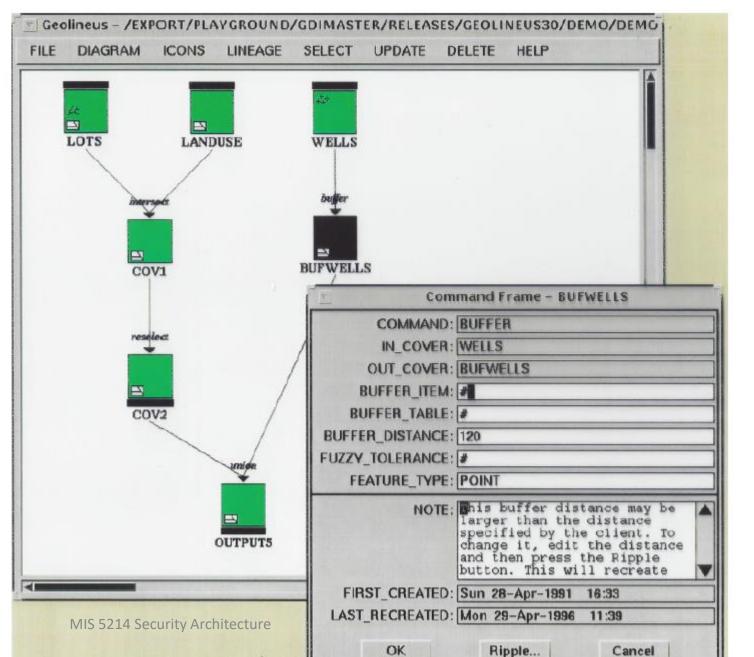

Generalization enables partitioning objects and structuring common properties and methods

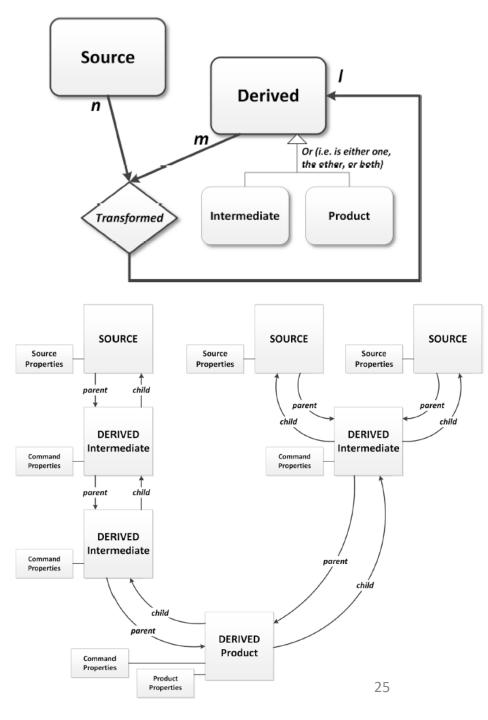

Example of generalizations of different types of datasets

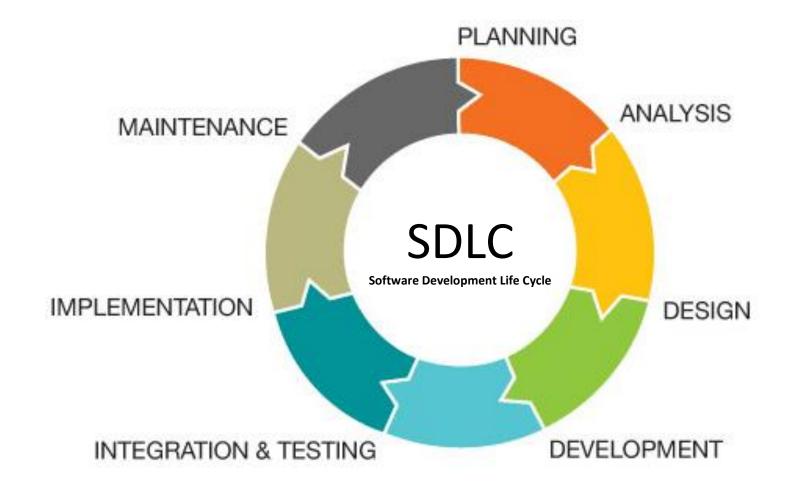

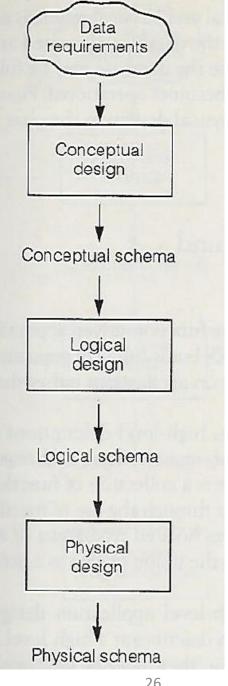

Data Provenance Metadata System

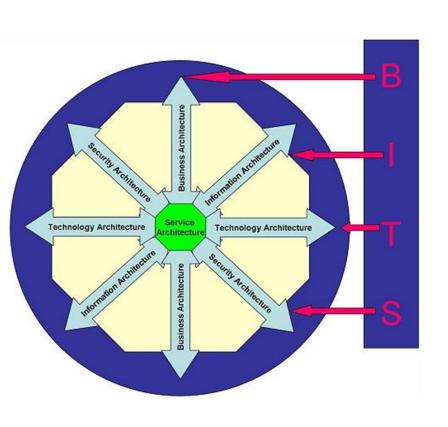

Conceptual models of information system design and development...

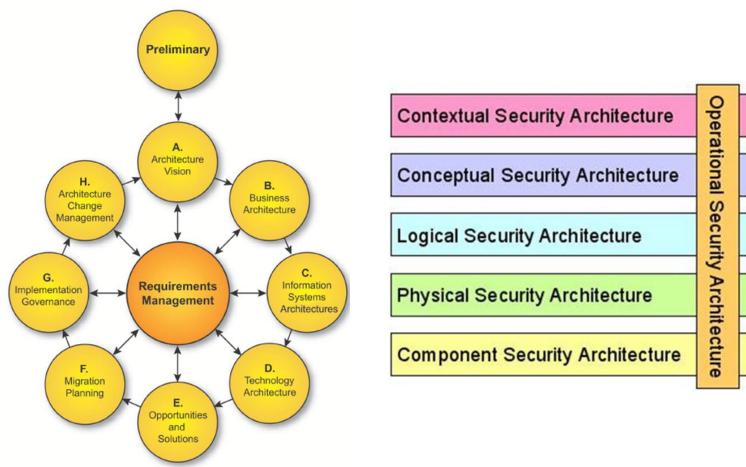

Database design

Models help us understand enterprise information systems and their security

Conceptual models of Information Systems

Information Systems – Models of Information Flows

An example of an important security architecture model:

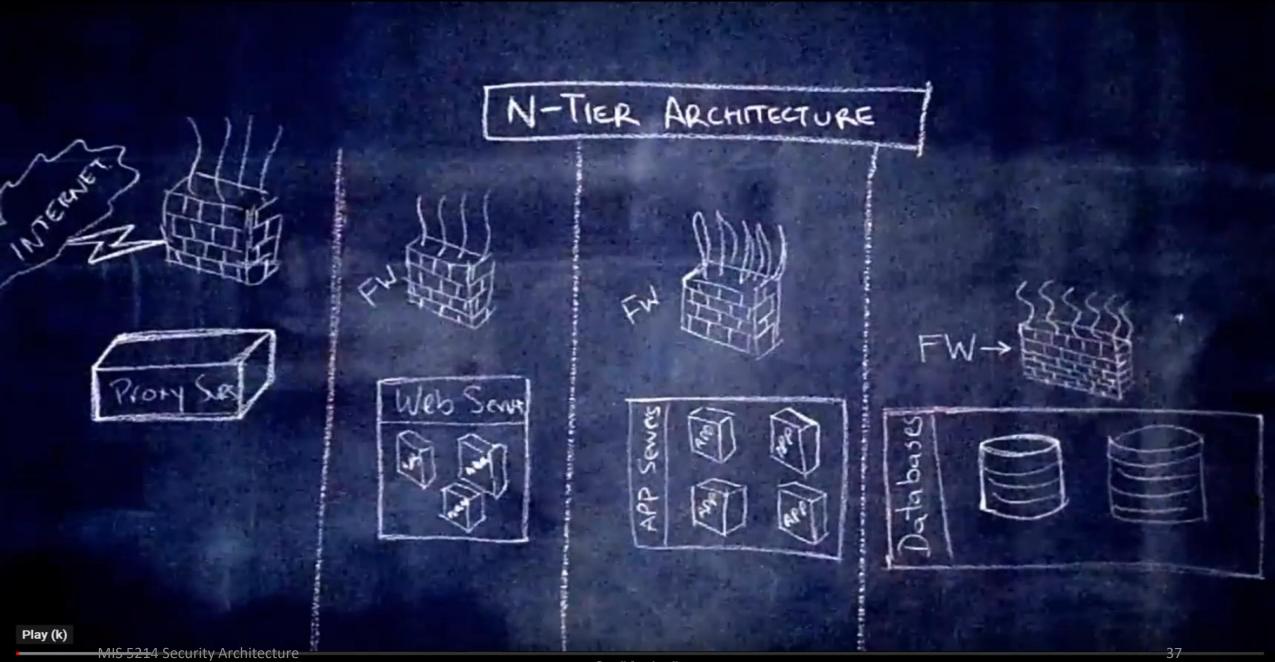

"Defense in Depth"

Also known as:

Layered Security

We will focus our study on elements of layered security moving forward...

In-Class Exercise: Draw a conceptual mode of an N-Tier Architecture for a Web-Based System

- Consider the purpose and contents of a web-based system for managing the accounts of customers of a public utility for a small town
- Using what you learned in the video, draw an N-Tier Architecture for the web-based system

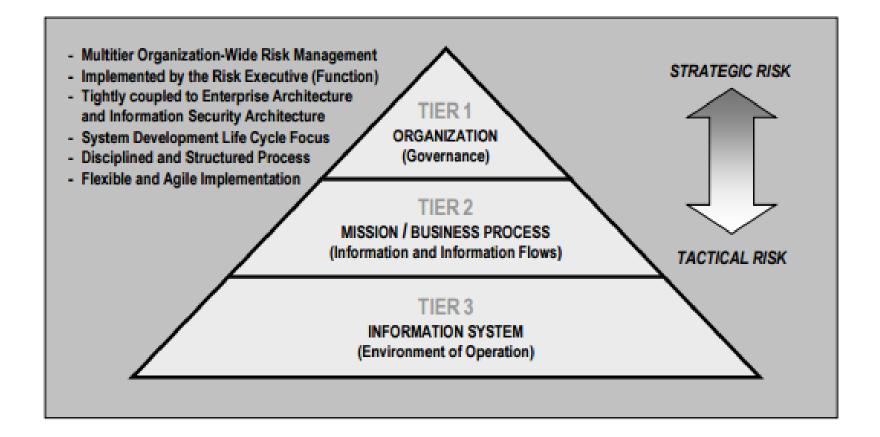

https://app.diagrams.net/

- Identify in your diagram:
 - 1. Where the users are
 - 2. How their data flows through the system as they access and view their billing records

Agenda

	POTENTIAL IMPACT					
Security Objective	LOW	LOW MODERATE HIGH				
Confidentiality Preserving authorized restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information. [44 U.S.C., SEC. 3542]	The unauthorized disclosure of information could be expected to have a limited adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized disclosure of information could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized disclosure of information could be expected to have a severe or catastrophic adverse effect on organizational operations, organizational assets, or individuals.			
Integrity Guarding against improper information modification or destruction, and includes ensuring information non-repudiation and authenticity. [44 U.S.C., SEC. 3542]	The unauthorized modification or destruction of information could be expected to have a limited adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized modification or destruction of information could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized modification or destruction of information could be expected to have a severe or catastrophic adverse effect on organizational operations, organizational assets, or individuals.			
Availability Ensuring timely and reliable access to and use of information. [44 U.S.C., SEC. 3542]	The disruption of access to or use of information or an information system could be expected to have a limited adverse effect on organizational operations, organizational assets, or individuals.	The disruption of access to or use of information or an information system could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals.	The disruption of access to or use of information or an information system could be expected to have a severe or catastrophic adverse effect on organizational operations, organizational assets, or individuals.			

FIPS Pub 199 Standards for Security Categorization

Low: Limited adverse effect

Medium: Serious adverse effect

High: Severe or catastrophic adverse effect

The generalized format for expressing the security category, SC, of an information system is:

```
SC information system = {(confidentiality, impact), (integrity, impact), (availability, impact)}, where the acceptable values for potential impact are LOW, MODERATE, or HIGH.
```

Example with multiple information types:

```
SC contract information = {(confidentiality, MODERATE), (integrity, MODERATE), (availability, LOW)}, = MODERATE rating
```

and

```
SC administrative information = {(confidentiality, Low), (integrity, Low), (availability, Low)}. = LOW rating
```

The resulting security category of the information system is expressed as:

```
SC acquisition system = {(confidentiality, MODERATE), (integrity, MODERATE), (availability, LOW)}, = MODERATE rating
```

What are the security categorizations of these datasets?

Dataset	Confidentiality	Integrity	Availability	Impact Rating
Communication	High	Moderate	Moderate	High
Electric	Moderate	Moderate	Moderate	Moderate
Traffic control	Low	Low	Low	Low
Comm_Electric Geodatabase				
Water Distribution System	Moderate	Moderate	Low	Moderate
Sanitary Collection System	Low	Low	Low	Low
Storm Collection System	Low	Low	Low	Low
Water_Sewer Geodatabase				

What is the overall impact ratings of the datasets?

Dataset	Confidentiality	Integrity	Availability	Impact Rating
Communication	High	Moderate	Moderate	High
Electric	Moderate	Moderate	Moderate	Moderate
Traffic control	Low	Low	Low	Low
Comm_Electric Geodatabase				
Water Distribution System	Moderate	Moderate	Low	Moderate
Sanitary Collection System	Low	Low	Low	Low
Storm Collection System	Low	Low	Low	Low
Water_Sewer Geodatabase				
Parcel Boundary Shapefile	Low	Low	Low	Low

What are the security categorizations of the geodatabases?

Dataset	Confidentiality	Integrity	Availability	Impact Rating
Communication	High	Moderate	Moderate	High
Electric	Moderate	Moderate	Moderate	Moderate
Traffic control	Low	Low	Low	Low
Comm_Electric Geodatabase	High	Moderate	Moderate	High
Water Distribution System	Moderate	Moderate	Low	Moderate
Sanitary Collection System	Low	Low	Low	Low
Storm Collection System	Low	Low	Low	Low
Water_Sewer Geodatabase	Moderate	Moderate	Low	Moderate
Parcel Boundary Shapefile	Low	Low	Low	Low

What is the overall Information System impact rating?

System - Critical Infrastructure Information

Dataset	Confidentiality	Integrity	Availability	Impact Rating
Communication	High	Moderate	Moderate	High
Electric	Moderate	Moderate	Moderate	Moderate
Traffic control	Low	Low	Low	Low
Comm_Electric Geodatabase	High	Moderate	Moderate	High
Water Distribution System	Moderate	Moderate	Low	Moderate
Sanitary Collection System	Low	Low	Low	Low
Storm Collection System	Low	Low	Low	Low
Water_Sewer Geodatabase	Moderate	Moderate	Low	Moderate
Parcel Boundary Shapefile	Low	Low	Low	Low

How would you transform these ordinal impact ratings into quantitative risk measures?

System - Critical Infrastructure Information					
Dataset	Confidentiality	Integrity	Availability	Impact Rating	
Communication	High	Moderate	Moderate	High	
Electric	Moderate	Moderate	Moderate	Moderate	
Traffic control	Low	Low	Low	Low	
Comm_Electric Geodatabase	High	Moderate	Moderate	High	
Water Distribution System	Moderate	Moderate	Low	Moderate	
Sanitary Collection System	Low	Low	Low	Low	
Storm Collection System	Low	Low	Low	Low	
Water_Sewer Geodatabase	Moderate	Moderate	Low	Moderate	
Parcel Boundary Shapefile	Low	Low	Low	Low	

How would you quantify risk to prioritize asset types for cost-effective information security protection?

Overall Risk of CIA Breach

Dataset	Impact Rating	Likelihood
Communication	High	High
Electric	Moderate	Low
Traffic control	Low	Low
Water Distribution System	Moderate	Low
Sanitary Collection System	Low	Low
Storm Collection System	Low	Low
Parcel Boundary Shapefile	Low	Moderate

CHAPTER 10 Risk Management

Table 10-1. Risk Level Matrix

Risk Scale: High (>50 to 100) Moderate (>10 to 50) Low (1 to 10)

Because the determination of risk ratings for impact and threat likelihood is largely subjective, it is best to assign each rating a numeric value for ease of calculation. The rationale for this justification can be explained in terms of the probability assigned for each threat likelihood level and a value assigned for each impact level. For example:

- . The probability assigned for each threat likelihood level is 1.0 for high, 0.5 for moderate, and 0.1 for low.
- . The value assigned for each impact level is 100 for high, 50 for moderate, and 10 for low.

Table 10-2, below, describes the risk levels shown in the above matrix. This risk scale, with its ratings of high, moderate, and low, represents the degree of risk to which an information system, facility, or procedure might be exposed if a given vulnerability were exploited. It also describes the type of action senior managers must take for each risk level.

Table 10-2. Risk Scale and Necessary Management Action

Risk Level	Risk Description and Necessary Management Action
High	If an observation or finding is evaluated as high risk, there is a strong need for corrective measures. An existing system may continue to operate, but a corrective action plan must be put in place as soon as possible.
Moderate	If an observation is rated as moderate risk, corrective actions are needed and a plan must be developed to incorporate these actions within a reasonable period of time.
Low	If an observation is described as low risk, the system's authorizing official must determine whether corrective actions are still required or decide to accept the risk.

10.1.5 Step 5 - Control Recommendations

The goal of the control recommendations is to reduce the level of risk to the information system and its data to a level the organization deems acceptable. These recommendations are essential input for the risk mitigation process, during which the recommended procedural and technical security controls are evaluated, prioritized, and implemented. This step is designed to help agencies identify and select controls appropriate to the organization's operations and mission that could mitigate or eliminate the risks identified in the preceding steps. The following factors should be considered in recommending controls and alternative solutions to minimize or eliminate identified risks:

- · Effectiveness of recommended options (e.g., system compatibility);
- Legislation and regulation;

90

Transformation of ordinal qualitative risk categories to interval quantitative risk measures

	Impact	
Low (10)	Moderate (50)	High (100)
10 x 1.0 = 10	50 x 1.0 = 50	100 x 1.0 = 100
10 x 0.5 = 5	50 x 0.5 = 25	100 x 0.5 = 50
10 x 0.1 = 1	50 x 0.1 = 5	100 x 0.1 = 10
	10 x 1.0 = 10 10 x 0.5 = 5	Low (10) Moderate (50) 10 x 1.0 = 10 50 x 1.0 = 50 10 x 0.5 = 5 50 x 0.5 = 25

Risk Scale: High (>50 to 100)

Moderate (>10 to 50)

Low (1 to 10)

01527a

Requires the risk analyst to contribute additional knowledge to transform ordinal scale into an interval scale...

Conceptual Views of NIST Risk Management Framework

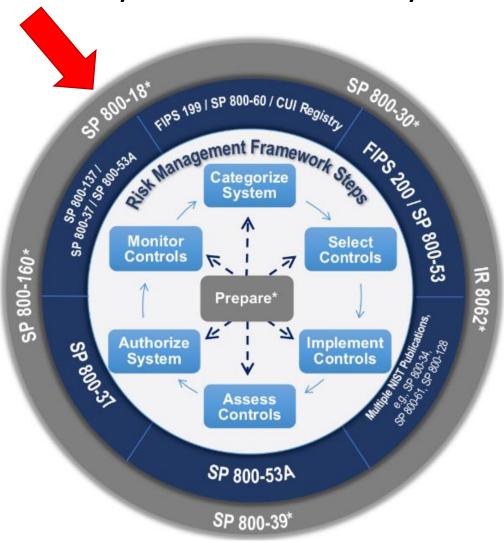

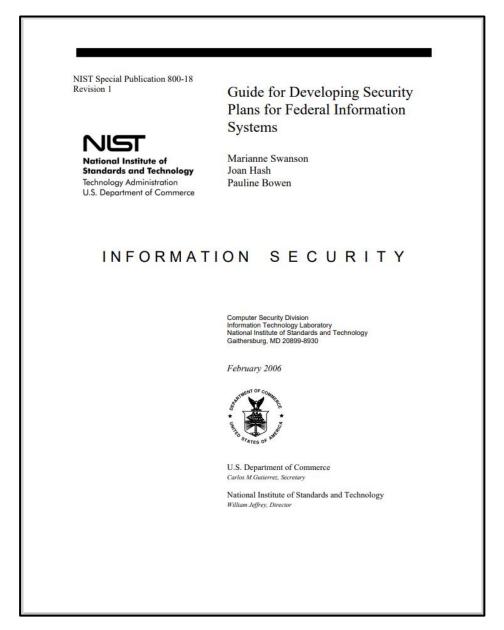

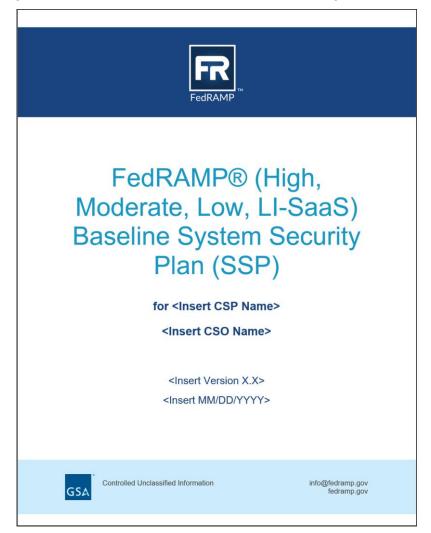

Documenting Information System Security Categorization

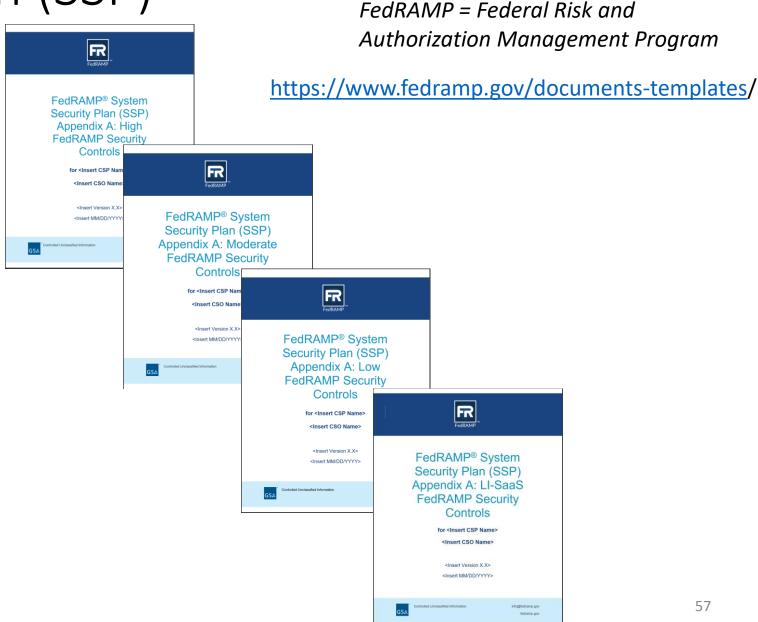

in a System Security Plan

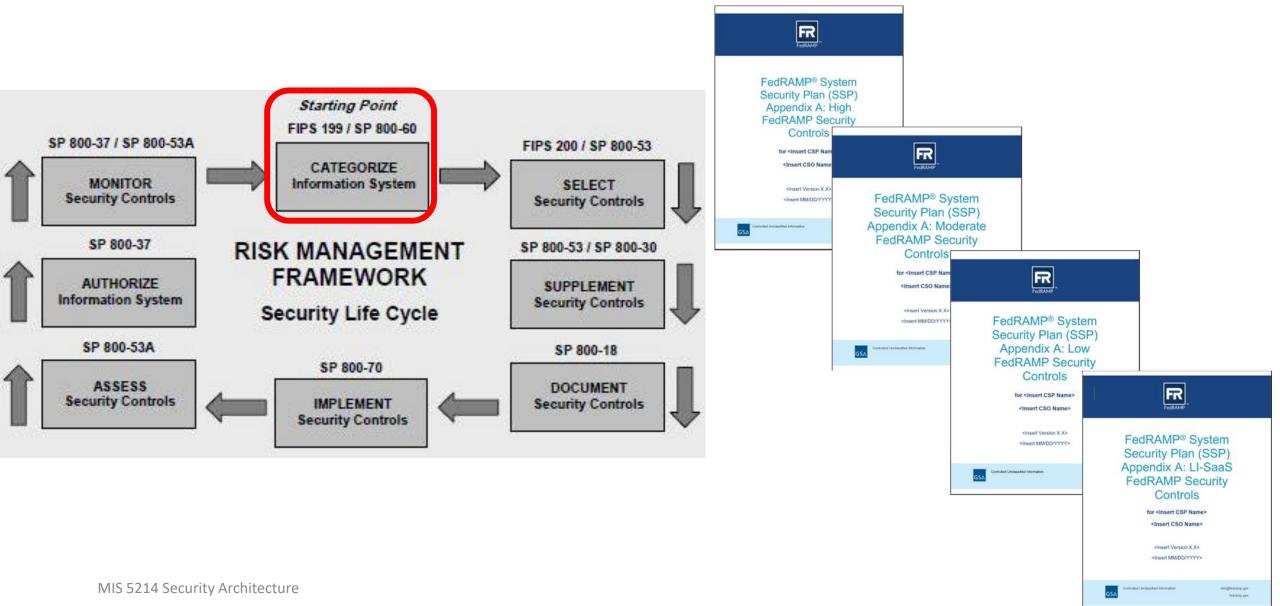

System Security Plan (SSP)

Information System Security Plan (SSP)

Understanding Baselines and Impact Levels

Low Impact is appropriate where the loss of confidentiality, integrity, and availability would result in limited adverse effects on an agency's operations, assets, or individuals

FedRAMP has 2 baselines for systems with Low Impact data:

LI-SaaS Baseline and Low Baseline

LI-SaaS Baseline

- Accounts for Low-Impact SaaS applications that do not store personal identifiable information (PII) beyond that generally required for login capability (i.e. username, password, and email address)
- Required security documentation is consolidated and the requisite number of security controls needing testing and verification are lowered relative to a standard Low Baseline authorization

Understanding Baselines and Impact Levels

Moderate Impact is appropriate for CSOs where the loss of confidentiality, integrity, and availability would result in serious adverse effects on an agency's operations, assets, or individuals

 Accounts for nearly 80% of CSP applications that receive FedRAMP authorization

Serious adverse effects could include significant operational damage to agency assets, financial loss, or individual harm that is not loss of life or physical.

Understanding Baselines and Impact Levels

High Impact data is usually in

- Law Enforcement and Emergency Services systems
- Financial systems
- Health systems
- ...any other system where loss of confidentiality, integrity, or availability could be expected to have a severe or catastrophic adverse effect on organizational operations, organizational assets, or individuals.
- The High Baseline accounts for the most sensitive, unclassified data in cloud computing environments, including data that involves the protection of life and financial ruin

NIST 800-53 risk controls are typically presented alphabetically

TABLE 1: SECURITY AND PRIVACY CONTROL FAMILIES

ID	FAMILY	ID	FAMILY
<u>AC</u>	Access Control	<u>PE</u>	Physical and Environmental Protection
<u>AT</u>	Awareness and Training	<u>PL</u>	Planning
<u>AU</u>	Audit and Accountability	<u>PM</u>	Program Management
<u>CA</u>	Assessment, Authorization, and Monitoring	<u>PS</u>	Personnel Security
<u>CM</u>	Configuration Management	<u>PT</u>	PII Processing and Transparency
<u>CP</u>	Contingency Planning	<u>RA</u>	Risk Assessment
<u>IA</u>	Identification and Authentication	<u>SA</u>	System and Services Acquisition
<u>IR</u>	Incident Response	<u>SC</u>	System and Communications Protection
MA	Maintenance	<u>SI</u>	System and Information Integrity
<u>MP</u>	Media Protection	<u>SR</u>	Supply Chain Risk Management

NIST 800-53 Controls can be grouped by "Class"

Table 2: Security Control Class, Family, and Identifier

3.16 RISK ASSESSMENT FAMILY

Table 3-16 provides a summary of the controls and control enhancements assigned to the Risk Assessment Family. The controls are allocated to the low-impact, moderate-impact, and high-impact security control baselines and the privacy control baseline, as appropriate. A control or control enhancement that has been withdrawn from the control catalog is indicated by a "W" and an explanation of the control or control enhancement disposition in light gray text.

TABLE 3-16: RISK ASSESSMENT FAMILY

CONTROL NUMBER	CONTROL NAME		SECURITY CONTROL BASELINES			
	CONTROL ENHANCEMENT NAME	PRIVACY CONTROL BASELINE	LOW	MOD	HIGH	
RA-1	Policy and Procedures	x	x	×	x	
RA-2	Security Categorization		x	x	x	
RA-2(1)	IMPACT-LEVEL PRIORITIZATION					
RA-3	Risk Assessment	x	х	x	x	
RA-3(1)	SUPPLY CHAIN RISK ASSESSMENT		х	x	×	
RA-3(2)	USE OF ALL-SOURCE INTELLIGENCE					
RA-3(3)	DYNAMIC THREAT AWARENESS					
RA-3(4)	PREDICTIVE CYBER ANALYTICS					
RA-4	Risk Assessment Update	W: Incorporated into RA-3.				
RA-5	Vulnerability Monitoring and Scanning		х	х	x	
RA-5(1)	UPDATE TOOL CAPABILITY	W: Incorporated into RA-5.				
RA-5(2)	UPDATE VULNERABILITIES TO BE SCANNED		х	х	X	
RA-5(3)	BREADTH AND DEPTH OF COVERAGE					
RA-5(4)	DISCOVERABLE INFORMATION				x	
RA-5(5)	PRIVILEGED ACCESS			x	x	
RA-5(6)	AUTOMATED TREND ANALYSES					
RA-5(7)	AUTOMATED DETECTION AND NOTIFICATION OF UNAUTHORIZED COMPONENTS	W: Inc	orporated i	nto CM-8.		
RA-5(8)	REVIEW HISTORIC AUDIT LOGS					
RA-5(9)	PENETRATION TESTING AND ANALYSES	W: Inc	orporated i	nto CA-8.		
RA-5(10)	CORRELATE SCANNING INFORMATION					
RA-5(11)	PUBLIC DISCLOSURE PROGRAM		x	x	x	
RA-6	Technical Surveillance Countermeasures Survey					
RA-7	Risk Response	X	x	x	X	
RA-8	Privacy Impact Assessments	X				
RA-9	Criticality Analysis			x	×	
RA-10	Threat Hunting					

How do you determine which RA controls are relevant to the web-based system you began designing for managing the utility's customers' billing records for the small town?

RA-1 RISK ASSESSMENT POLICY AND PROCEDURES

Control: The organization:

 Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]:

RA-1 RISK ASSESSMENT POLICY AND PROCEDURES

Control: The organization:

- Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]:
 - A risk assessment policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and
 - Procedures to facilitate the implementation of the risk assessment policy and associated risk assessment controls; and
- Reviews and updates the current:
 - 1. Risk assessment policy [Assignment: organization-defined frequency]; and
 - 2. Risk assessment procedures [Assignment: organization-defined frequency].

rpose, scope, roles, responsibilities, nong organizational entities, and compliance;

of the risk assessment policy and associated

nization-defined frequency]; and organization-defined frequency].

tablishment of policy and procedures for the Is and control enhancements in the RA family. s, Executive Orders, directives, regulations, policies and procedures at the organization s and procedures unnecessary. The policy can ity policy for organizations or conversely, can mplex nature of certain organizations. The am in general and for particular information nent strategy is a key factor in establishing

policy and procedures. Related control: PM-9.

Control Enhancements: None.

Priority and Baseline Allocation:

P1 LOW RA-1 MOD RA-1 HIGH RA-1 73

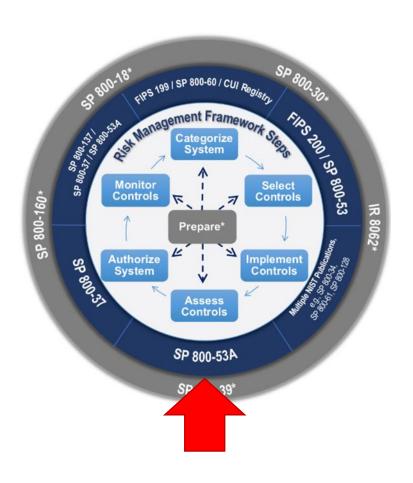

SSP – Control Inventory Example

RA-1 Policy and Procedures (L)(M)(H)

- a. Develop, document, and disseminate to [Assignment: organization-defined personnel or roles]:
 - [Selection (one-or-more): organization-level; mission/business process-level; system-level] risk assessment policy that:
 - (a) Addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and
 - (b) Is consistent with applicable laws, executive orders, directives, regulations, policies, standards, and guidelines; and
 - Procedures to facilitate the implementation of the risk assessment policy and the associated risk assessment <u>controls</u>;
- Designate an [Assignment: organization-defined official] to manage the development, documentation, and dissemination of the risk assessment policy and procedures; and
- c. Review and update the current risk assessment:
 - 1. Policy [FedRAMP Assignment: at least every three (3) years] and following [Assignment: organization-defined events]; and
 - Procedures [FedRAMP Assignment: at least annually] and following [FedRAMP Assignment: significant changes].

Assessing InfoSec control

Special Publication 800-53A Revision 4 Assessing Security and Privacy Controls in Federal Information Systems and Organizations — Building Effective Assessment Plans

FAMILY: RISK ASSESSMENT

RA-1	RISK ASSESSMENT POLICY AND PROCEDURES				
	ASSESSME	NT OBJECTIVE:			
	Determine	if the organizat	ion:		
	RA-1(a)(1)	RA-1(a)(1)[1]	develops and do addresses:	cuments a risk assessment policy that	
			RA-1(a)(1)[1][a]	purpose;	
			RA-1(a)(1)[1][b]	scope;	
			RA-1(a)(1)[1][c]	roles;	
			RA-1(a)(1)[1][d]	responsibilities;	
			RA-1(a)(1)[1][e]	management commitment;	
			RA-1(a)(1)[1][f]	coordination among organizational entities;	
			RA-1(a)(1)[1][g]	compliance;	
		RA-1(a)(1)[2]	defines personne to be disseminat	el or roles to whom the risk assessment policy is ed;	
		RA-1(a)(1)[3]	disseminates the personnel or rol	risk assessment policy to organization-defined es;	
	RA-1(a)(2)	RA-1(a)(2)[1]		cuments procedures to facilitate the of the risk assessment policy and associated controls;	
		RA-1(a)(2)[2]	defines personne disseminated;	el or roles to whom the procedures are to be	
		RA-1(a)(2)[3]	disseminates the or roles;	procedures to organization-defined personnel	
	RA-1(b)(1)	RA-1(b)(1)[1]	defines the freque assessment police	nency to review and update the current risk	
		RA-1(b)(1)[2]	reviews and upd organization-dej	ates the current risk assessment policy with the fined frequency;	
	RA-1(b)(2)	RA-1(b)(2)[1]	defines the frequency to review and update the current risk assessment procedures; and		
		RA-1(b)(2)[2]	reviews and updates the current risk assessment procedures with the organization-defined frequency.		
	POTENTIAL ASSESSMENT METHODS AND OBJECTS: Examine: [SELECT FROM: risk assessment policy and procedures; other relevant documents or records]. Interview: [SELECT FROM: Organizational personnel with risk assessment responsibilities; organizational personnel with information security responsibilities].				

RA-2 Security Categorization (L)(M)(H)

- a. Categorize the system and information it processes, stores, and transmits;
- b. Document the security categorization results, including supporting rationale, in the security plan for the system; and
- c. Verify that the authorizing official or authorizing official designated representative reviews and approves the security categorization decision.

Assessing InfoSec control

RA-2	SECURITY CATEGORIZATION					
	ASSESSMENT OBJECTIVE:					
	Determine if the organization:					
	RA-2(a) categorizes information and the information system in accordance with a federal laws, Executive Orders, directives, policies, regulations, standar guidance;					
	RA-2(b)	documents the security categorization results (including supporting rationale) in the security plan for the information system; and				
	RA-2(c)	ensures the authorizing official or authorizing official designated representative reviews and approves the security categorization decision.				
	POTENTIAL ASSESSMENT METHODS AND OBJECTS:					
	Examine	: [SELECT FROM: Risk assessment policy; security planning policy and procedures; procedures addressing security categorization of organizational information and information systems; security plan; security categorization documentation; other relevant documents or records].				
	Interview	: [SELECT FROM: Organizational personnel with security categorization and risk assessment responsibilities; organizational personnel with information security responsibilities].				
	Test: [SEL	ECT FROM: Organizational processes for security categorization].
